List of publications by **V.A.Brumberg**

1. Permanent Configurations in the Problem of Four Bodies and Their Stability. Astron. Zh., **34**, No.1, 55–74, 1957 (Russian).

2. Relativistic Corrections in the Theory of Motion of the Moon. Bull. ITA, **6**, No. 10, 733–756, 1958 (R).

3. Equations of Motion and Coordinate Conditions in the Relativistic Problem of N Bodies. Astron. Zh., **35**, No.6, 893–903, 1958 (R).

4. Trajectories of Double Collision in the Restricted Problem of Three Bodies. Bull. ITA, **7**, No.10, 833–843, 1960 (R).

5. On the Determination of Optimum Energy Orbits. Bull. ITA, **8**, No. 1, 1–10, 1961 (R).

6. On the Motion of Artificial Satellites of the Moon. Astron. Zh., **38**, No.1, 131–144, 1961 (in collaboration with G. A. Chebotarev and S. N. Kirpichnikov) (R).

7. Random Initial Values and Random Parameters in Problem of Celestial Mechanics. Astron. Zh., **38**, No.4, 738–753, 1961 (R).

8. Numerical Solution of Boundary Value Problems in Celestial Mechanics by the Method of Steepest Descent. Bull. ITA, **8**, No.4, 269–282, 1962 (R).

9. General Perturbations of the Elements of Artificial Lunar Satellites. Bull. ITA, **8**, No.10, 705–732, 1962 (R).

10. Series of Polynomials in the Problem of Three Bodies. Bull. ITA, **9**, No.4, 234–256, 1963 (R).

11. Theory of the Motion of Artificial Lunar Satellites. Proc.15 International Astronaut. Congr., **1**, 187–213, Warszawa, 1965.

12. Representation of the Coordinates of the Planets by Trigonometric Series. Trans. ITA, **11**, 3–88, 1966 (R).

13. Expansion of the Perturbing Function in Satellite Problems. Bull. ITA, **11**, No.2, 73–83, 1967 (R).

14. On Numerical Construction of the Generalized Planetary Theory. Astron. Zh., **44**, No.1, 204–216, 1967 (R).

15. Equations of Rotational Motion of the Planets in General Theory of Relativity. Astron.Zh., **45**, No.4, 828–840, 1968 (R).

16. On the Interpretation of Coordinates in the Schwarzschild Problem. Astron. Zh., **45**, No.5, 1110–1113, 1968 (R).

17. Relationship of Translatory and Rotational Motion of the Planets in the Einstein Theory of Gravitation. Bull. ITA, **12**, No.6, 441–451, 1970 (R).

18. On a Differential Equation for Hansen Coefficients. Bull. ITA, **12**, No.6, 452–457, 1970 (R).

19. Application of Hill's Lunar Method in General Planetary Theory. In: "Periodic Orbits, Stability and Resonances" (G. E. O. Giacaglia ed.), 410–450, Reidel Publ. Comp., Dordrecht – Holland, 1970.

20. Analytical Methods for the Orbits of Artificial Satellites of the Moon. Celest.Mech., **3**, No.2, 197–221, 1971 (in collaboration with L. S. Evdokimova and N. G. Kochina).

21. Trigonometric Linear Theory of the Second Order of the Secular Perturbations in the Motion of the Major Planets. Observations of Artificial Celestial Bodies, **62**, 42–72, 1971 (in collaboration with A. V. Egorova) (R).

22. Construction of a General Planetary Theory of the First Order. Celest.Mech., **8**, No.3, 335–356, 1973 (in collaboration with J. Chapront).

23. Astronautics as a Stimulus for Celestial Mechanics. 24th Internat. Astronaut. Congr., Baku, 1973. In: Space activity impact on science and technology, 51–66, Pergamon Press, Oxford, 1976.

24. An Iterative Method of General Planetary Theory. In: "The Stability of the Solar System and of Small Stellar Systems" (Y. Kozai ed.), 139–155, Reidel Publ. Comp., Dordrecht, 1974.

25. The System AMC of Performing Analytical Operations with Poisson Series by Computer. Algorithms of Celestial Mechanics, No.1, ITA, Leningrad, 1974, 44 p. (in collaboration with L. A. Isakovich) (R).

26. Quasi–Periodic Intermediate Orbits for Major Planets and Resonances of the Zero Order. Astron. Zh., **52**, No.2, 420–431, 1975 (in collaboration with L. S. Evdokimova and V. I. Skripnichenko) (R).

27. Secular Perturbations in General Planetary Theory. Celest.Mech., **11**, No.1, 131–138, 1975 (in collaboration with L. S. Evdokimova and V. I. Skripnichenko).

28. The Mass Components and Inclination of Binary Pulsar Determined from the Relativity Effects. Astron. Zh. Lett.,**1**, No.1, 5–9, 1975; Inst. Appl. Math., Preprint No. 121, 1974 (in collaboration with Ya. B. Zel'dovich, I. D. Novikov and N. I. Shakura) (R).

29. Keplerian Processor and Expansion of the Perturbing Function by the System AMC. Algorithms of Celestial Mechanics, No.4, ITA, Leningrad, 1975, 28 p. (in collaboration with L. A. Isakovich) (R).

30. Mathematical Results of the General Planetary Theory in Rectangular Coordinates. In: Dynamics of Planets and Satellites and Theories of Their Motion (ed. V. Szebehely), 33–48, Reidel Publ. Comp., Dordrecht, 1978 (in collaboration with L. S. Evdokimova and V. I. Skripnichenko).

31. Perturbation Theory in Rectangular Coordinates. Celest.Mech., **18**, No.4, 319–336, 1978.

32. Astronomical Measurements and Coordinate Conditions in Relativistic Celestial Mechanics. Celest.Mech., **20**, No.4, 329–342, 1979.

33. Invariant Interpretation of Astronomical Measurements in the Solar System. In: Contemporary Problems of General Theory of Relativity, 6–31, Inst. of Physics, Minsk, 1979 (in collaboration with A. M. Finkelstein)(R).

34. The Problem of Comparing the Observation Results with the Theoretical Data to Check on Relativistic Effects in the Solar System. Sov. Phys. JETP, **49**, No. 5, 749–755, 1979 (in collaboration with A. M. Finkelstein).

35. UPP as an Universal System for Analytical Operations with Poisson Series. Astronomy and Geodesy, No. 8, 49–53, Tomsk University, 1980 (in collaboration with I. O. Babaev, N. N. Vasiljev, T. V. Ivanova, V. I. Skripnichenko

and S. V. Tarasevich) (R).

36. Universal Poissonian Processor (UPP). In: Analytical Calculations by Computer and Their Application in Theoretical Physics, 80–91, Dubna, 1980 (in collaboration with I. O. Babaev, N. N. Vasiljev, T. V. Ivanova, V. I. Skripnichenko and S. V. Tarasevich) (R).

37. Stimulation of Dynamical Effects in Gravitating Systems. Trans. Astrophys. Inst., **35**, 8–14, 1981, Alma-Ata (in collaboration with L. M. Genkina) (R).

38. Relativistic Effects in Radar, Optical and Radiointerferometric Measurements. Astron. Zh., **58**, No.1, 181–193, 1981 (R).

39. Relativistic Reduction of Astronomical Measurements and Reference Frames. In: Reference Coordinate Systems for Earth Dynamics (eds. E. M. Gaposchkin and B. Kolaczek), 283–294, Reidel, Dordrecht, 1981.

40. New Approach to Determining Planetary Perturbations in Lunar Theory. Celest.Mech., **26**, No.1, 77–81, 1982 (in collaboration with T. V. Ivanova).

41. Relativistic Dynamics of the Earth–Moon System. In: Sun and Planetary System (eds. W. Fricke and G. Teleki), 423–428, Reidel, Dordrecht, 1982 (in collaboration with T. V. Ivanova).

42. Application of the System GRATOS to Determine the Perturbations of a Spherically Symmetrical Metric. In: Conference on Systems and Techniques of Analytical Computing and Their Applications in Theoretical Physics, 149–154, Dubna, 1983 (in collaboration with S. V. Tarasevich) (R).

43. The Systems of Analytical Calculations by Computer (Analytical Application Packages). Inst. Appl. Math. Informator No. 1, 65 p., Moscow, 1983 (in collaboration with M. V. Grosheva, G. B. Efimov et al.) (R).

44. Relativistic Effects in the Dynamics of the Earth–Moon System. Trans. ITA, **19**, 3–30,1985 (in collaboration with T. V. Ivanova) (R).

45. On Solution of the Secular System of the Equations of Motion of the Moon in the Trigonometric Form. Bull. ITA, **15**, No.8, 424–439, 1985 (in collaboration with T. V. Ivanova) (R).

46. The Problems of Relativistic Celestial Mechanics and Astrometry Are Discussed. Vestnik of the USSR Academy of Sciences, No.1, 89–93, 1986 (R).

47. Relativistic Reduction of Astronomical Observations. In: Astrometric Techniques (eds. H. K. Eichhorn and R. J. Leacock), p. 19–42, Reidel, 1986.

48. Present Problems in Relativistic Celestial Mechanics. In: Relativity in Celestial Mechanics and Astrometry (eds. J. Kovalevsky and V. A. Brumberg), p. 5–17, Reidel, Dordrecht, 1986.

49. Orbital Evolution of Massive Close Binary under the Influence of Small Bodies. In: Space Dynamics and Celestial Mechanics (ed. K. B. Bhatnagar), p.181–195, Reidel, Dordrecht, 1986 (in collaboration with T. V. Ivanova and S. V. Tarasevich).

50. Unsolved Problems of Celestial Mechanics. Celest.Mech., **39**, No.2, 133–140, 1987 (in collaboration with J. Kovalevsky).

51. Influence of a Hyperbolic Flyby of a Small Mass on the Orbital Evolution of a Massive Binary. Celest.Mech., **41**, Nos.1–4, 313–321, 1987 (in collaboration

with L. K. Babadzanjanz).

52. Contemporary Problems of Relativistic Celestial Mechanics and Astrometry. Proc. 10th ERAM of the IAU, **3** (ed. M. Sidlichovsky), p.3–9, Prague, 1987.

53. Post-Post-Newtonian Propagation of Light in the Schwarzschild Field. Kinematics and Physics of Celestial Bodies, **3**, No.1, 8–13, 1987 (R)..

54. Numerical Investigation of the Orbital Evolution of a Massive Binary in the Field of Small Masses. In: The Few Body Problem (ed. M. J. Valtonen), 233–238, Kluwer, Dordrecht, 1988 (in collaboration with T. V. Ivanova).

55. Celestial Mechanics. IAU Commission 7 Report. IAU Transactions 20 A, 15–28, Reidel, Dordrecht, 1988.

56. Relativistic Equations of Motion of an Earth's Satellite in the Geocentric Frame of Reference. Kinematics and Physics of Celestial Bodies, **5**, No.1, 3–8, 1989 (in collaboration with S. M. Kopejkin) (R).

57. Relativistic Theory of Celestial Reference Frames. In: Reference Frames in Astronomy and Geophysics (eds. J. Kovalevsky, I. I. Mueller and B. Kolaczek), 115–142, Kluwer, Dordrecht, 1989 (in collaboration with S. M. Kopejkin).

58. Relativistic Reference Systems and Motion of Test Bodies in the Vicinity of the Earth. Nuovo Cimento, **103 B**, No.1, 63–98, 1989 (in collaboration with S. M. Kopejkin).

59. Specialized Celestial Mechanics Systems for Symbolic Manipulation. Celest.Mech., **45**, Nos.1–3, 149–162, 1989 (in collaboration with N. N. Vasiljev and S. V. Tarasevich).

60. Relativistic Time Scales in the Solar System. Celest.Mech., **48**, No.1, 23–44, 1990 (in collaboration with S. M. Kopejkin).

61. Relativistic Reduction of Astrometric Observations at POINTS Level of Accuracy. In: Inertial Coordinate System on the Sky (eds. J. H. Lieske and V. K. Abalakin), 229–240, Kluwer, Dordrecht, 1990 (in collaboration with S. A. Klioner and S. M. Kopejkin).

62. Encounter in the Keplerian Field: Analytical Treatment. Celest.Mech., **49**, No.2, 133–144, 1990 (in collaboration with T. V. Ivanova).

63. Relativistic Hierarchy of Reference Systems and Time Scales. Proc. IAU Colloquium No. 127 (eds. J. A. Hughes, C. A. Smith and J. H. Kaplan), 36–49, USNO, Washington, 1991.

64. Relativistic Effects in the Critical Inclination Problem in Artificial Satellite Theory. Celest. Mech., **52**, No.4, 345–353, 1991 (in collaboration with A. H. Jupp).

65. Relativistic Reference Frames Including Time Scales: Questions and Answers. Celest. Mech., **52**, No.4, 355–373, 1991 (in collaboration with M. H. Soffel).

66. Relativistic Geocentric Satellite Equations of Motion in Closed Form. Astron. Astrophys., **257**, No.2, 777–782, 1992.

67. Relativistic Aspects of Reference Systems and Time Scales. Highlights of Astronomy, (ed. J. Bergeron), **9**, 133–139, 1992.

68. Analytical Algorithms of Relativistic Reduction of Astronomical Observations. Journées 1991, pp. 141–148, Obs. de Paris, 1992 (in collaboration with P. Bretagnon and G. Francou).

69. Analytical Relativistic Transformations Between Reference Systems. Astron. Astrophys., **275**, 651–658, 1993 (in collaboration with P. Bretagnon and G. Francou).

70. General Planetary Theory in Elliptic Functions. Celest. Mech., **59**, No.1, 1–36, 1994

71. General Planetary Theory Revisited with the Aid of Elliptic Functions. Proc. 25th Symposium on Celestial Mechanics (eds. H. Kinoshita and H.Nakai), pp. 156–171, Tokyo, 1992.

72. Special Functions in Artificial Satellite Theory. In: Proc. of Artificial Satellite Theory Workshop (eds. P.K.Seidelmann and B.Kaufman), pp. 220–222, USNO, 1994.

73. Analytical Linear Perturbation Theory for Highly Eccentric Satellite Orbits. Celes. Mech., **61**, No. 4, 369–387, 1995 (in collaboration with E.Brumberg, Th.Konrad and M.Soffel).

74. General Relativistic Description of Earth's Rotation in Different Reference Systems. J. of Geodynamics,**20**, No. 2, 181–197,1995

75. Derivative of Kaula's Inclination Function. Celes. Mech., **62**, No. 2, 183–189, 1995 (in collaboration with D. Brumberg).

76. Analytical Techniques for Compact Theories of Motion. In: Notes Sci. et Tech. du BDL, S050, 43–48, Paris, 1995.

77. Astronomical Units and Constants in the General Relativity Framework. Celes. Mech., **64**, 231–242, 1996 (in collaboration with P. Bretagnon and B. Guinot).

78. Theory Compression with Elliptic Functions. In: Dynamics, Ephemerides and Astrometry of the Solar System (eds. S.Ferraz-Mello, B.Morando and J.-E.Arlot), pp. 89–100, Kluwer, 1996.

79. Numerical Efficiency of the Elliptic Function Expansions in the First-Order Intermediary for General Planetary Theory. In: Dynamics, Ephemerides and Astrometry of the Solar System (eds. S.Ferraz-Mello, B.Morando and J.-E.Arlot), pp. 101–104, Kluwer, 1996 (in collaboration with S.A.Klioner).

80. Reference Systems and Astronomical Constants in General Relativity. In: Earth Rotation, Reference Systems in Geodynamics and Solar System (Journées 1995, eds. N.Capitaine, B.Kolaczek, and S.Debarbat), pp. 29–36, Warsaw, 1995.

81. Ephemeris Astronomy Definitions and Constants in General Relativity. In: Dynamics and Astrometry of Natural and Artificial Celestial Bodies (IAU Colloquium No. 165, Poznan, 1996, eds. I.M.Wytrzyszczak, J.H.Lieske and R.A.Feldman), pp. 439–446, Kluwer, 1997.

82. New Approach to the Earth's Rotation Problem Consistent with the General Planetary Theory. In: Dynamics and Astrometry of Natural and Artificial Celestial Bodies (IAU Colloquium No. 165, Poznan, 1996, eds.

5

I.M.Wytrzyszczak, J.H.Lieske and R.A.Feldman), pp. 301–306, Kluwer, 1997 (in collaboration with T.V.Ivanova).

83. Astronomical Concepts and Quantities in the GRT Framework. Inst. Appl. Astron. Transactions No. 1, pp. 325–333, 1997, St. Petersburg (R)

84. Corrections pour la réduction des observations. In: Introduction aux éphémérides astronomiques. Supplément explicatif à la Connaissance des Temps (eds. J.-L. Simon, M. Chapront-Touzé, B. Morando and W. Thuillot), pp. 171–208, Bureau des Longitides, 1997 (in collaboration with M. Chapront-Touzé and J. Kovalevsky).

85. GRT and Contemporary Fundamental Astronomy Language. Journées Sci. du BDL, Notes Sci. et Tech. du BDL, S056, 7–11, 1997, Paris.

86. General Relativity and the IAU Resolutions. Report of the IAU WGAS Sub-Working Group on Relativity in Celestial Mechanics and Astrometry (RCMA SWG). 23rd GA of the IAU, Kyoto, 1997. Highlights of Astronomy, 11A, 194–199, 1998 (in collaboration with P. Bretagnon, N. Capitaine, T. Damour, T.M. Eubanks, T. Fukushima, B. Guinot, S.A. Klioner, S.M. Kopeikin, A.V. Krivov, P.K. Seidelmann, and M.H.Soffel).

87. GRT equations of the Earth's Rotation. In: Notes Sci. et Tech. du BDL, S057, 1–13, 1997, Paris.

88. Operator Expansions with Elliptic Anomaly. Inst. Appl. Astron. Transactions No. 3, pp. 242–258, 1998, St. Petersburg (in collaboration with E.V.Brumberg) (R)

89. Post–Newtonian Equations of the Earth's Rotation. Inst. Appl. Astron. Transactions No. 3, pp. 152–171, 1998, St. Petersburg (R)

90. Some Techniques for Determining Relativistic Planetary Perturbations in the Theories of Motion of the Major Planets. Inst. Appl. Astron. Transactions No. 4, pp. 199–224, 1999, St. Petersburg (R)

91. Algorithms of Relativistic Reduction of Space Astrometric Observations. In: Notes Sci. et Tech. du IMCCE, S074, 1–13, 2000, Paris.

92. Kinematical Relativistic Corrections for Earth's Rotation Parameters. In: Towards Models and Constants for Sub–Microarcsecond Astrometry (IAU Colloquium 180, Washington, 2000, eds. K.J.Johnston, D.D.McCarthy, B.J.Luzurn and G.H.Kaplan), pp. 293–302, USNO, Washington 2000 (in collaboration with P.Bretagnon)

93. Relativistic Celestial Mechanics and Earth Rotation Parameters (IPA Conf. 2000). Inst. Appl. Astron. Transactions No. 6, pp. 170–184, 2001, St. Petersburg (in collaboration with P.Bretagnon) (R)

94. Elliptic Anomaly in Constructing Long–Term and Short–Term Dynamical Theories (JENAM–2000, Moscow, 2000) Celest. Mech. & Dyn. Astron., 80, No. 3/4, 159–166, 2001 (in collaboration with E.V.Brumberg)

95. IAU Resolutions on Reference Systems and Time Scales in Practice. Astron. Astrophys., 367, 1070–1077, 2001 (in collaboration with E.Groten)

96. A Note on Earth's Rotation Angular Velocity in the General–Relativity Framework. J. of Geodesy, 75, No. 12, 673–676, 2001 (in collaboration with

E.Groten)

97. On Determination of Heights by Using Terrestrial Clocks and GPS Signals. J. of Geodesy **76**, No. 1, 49–54, 2002 (in collaboration with E.Groten)

98. Relativistic celestial mechanics–2002: results and prospects. Inst. Appl. Astron. Transactions No. 8, pp. 37–42, 2002, St. Petersburg

99. Special Solutions in a Simplified Restricted Three–Body Problem with Gravitational Radiation taken into Account. Celest. Mech. & Dyn. Astron., **85**, No. 3, 269–291, 2003.

100. On transformation between International celestial and terrestrial reference systems. Astron. Astrophys. **408**, 387–400, 2003 (in collaboration with P.Bretagnon)

101. On Relativistic Equations of Motion of an Earth Satellite. Celest. Mech. & Dyn. Astron. **88**, 209-225, 2004

102. Relativistic indirect third–body perturbations in the SMART Earth's rotation theory. In: Astrometry, Geodynamics and Solar System Dynamics: from milliarcseconds to microarcseconds (Journées 2003), eds. A.Finkelstein and N.Capitaine, 302-313, St.Petersburg, 2003 (in collaboration with J.-L.Simon).

103. Relativistic coordinate systems and time scales. In: Brumberg V.A. et al., Explanatory Supplement to the Astronomical Yearbook, IAA Trans. 10, 44-61, St. Petersburg, 2004 (in Russian).

104. Systèmes de référence relativistes. In: Éphémérides astronomiques 2005. Connaissance des Temps, 61–67. EDP Sciences, 2005.

105. Secular increase of Astronomical Unit from analysis of the major planet motions, and its interpretation, Cel.Mech. Dyn.Astron., **90**, No. 3–4, 267–288, 2004 (in collaboration with G.A.Krasinsky).

106. 100 years of Relativity. Celest. Mech. & Dyn. Astron., **91**, Nos. 1-2, 1-5, 2005.

107. RCMA Lectures (12 lectures on Relativity in Celestial Mechanics and Astrometry). http://www.imcce.fr (academics/courses of astronomy), 2008.

108. Precession/Nutation Solution Consistent with the General Planetary Theory. Cel. Mech. & Dyn. Astron. **97**, No. 3, 189-210, 2007 (in collaboration with T.V.Ivanova).

109. Relativistic extension of the SMART Earth's rotation theory and the ITRS↔GCRS relationship. In: Notes Sci. et Tech. d'IMCCE, S088, 2007, Paris (in collaboration with J.-L.Simon).

110. On derivation of EIH (Einstein-Infeld-Hoffman) equations of motion from the linearized metric of general relativity theory. Cel. Mech. & Dyn. Astron. **99**, No. 3, 245–252, 2007.

111. Some uncompleted problems of Newtonian and relativistic celestial mechanics In: Notes Sci. et Tech. d'IMCCE, S093, 2008, Paris.

112. Relativistic celestial mechanics on the verge of its 100 year anniversary (Brouwer Award lecture). Cel. Mech. & Dyn. Astron. , **106**, 209–234, 2010 (DOI 10.1007/s10569-009-9237-y).

113. On Constructing the General Earth's Rotation Theory. Cel. Mech. &

Dyn. Astron., **109**, 385–408, 2011 (in collaboration with T.V.Ivanova) (DOI: 10.1007/s10569-011-9334-6).

114. Some Techniques for Determining Relativistic Planetary Perturbations in the Theories of Motion of the Major Planets. In: Notes Sci. et Tech. d'IMCCE, S096, 2012, Paris.

115. Celestial Mechanics: Past, Present, Future. Solar System Research **47**, No. 5, 347–358, 2013 (Russian version in Astronom. Vestnik, **47**, No. 5, 376–389, 2013) .

116. On Constructing the Optimum Rotating Reference Systems for Non–Rigid Body Dynamics: Remake of Miachin's Approach. Cel. Mech. & Dyn. Astron. (submitted, 2013; withdrawn, 2014).

117. A supplementary note on constructing the general Earth's rotation theory In: Complex Planetary Systems (Proceedings IAU Symposium No. 310, Namur, 2014), eds. Z. Knezevic and A. Lemaitre, 13–16, Cambridge, 2014 (in collaboration with T.V.Ivanova).

Monographs published by **V. A. Brumberg**

1. Relativistic Celestial Mechanics. Nauka, Moscow, 1972, 382 pp. (R).
2. Celestial Mechanics Methods of Performing Literal Operations by Computer. Tomsk University, Tomsk, 1974, 114 pp. (R).
3. Analytical Algorithms of Celestial Mechanics, Nauka, Moscow, 1980, 205 pp. (R).
4. Essential Relativistic Celestial Mechanics, 328 pp., Adam Hilger, Bristol, 1991.
5. Analytical Techniques of Celestial Mechanics, 236 pp., Springer, Heidelberg, 1995.
6. Celestial Dynamics at High Eccentricities. Gordon and Breach, 220 pp., 1999 (in collaboration with E.V.Brumberg)

Monographs edited by **V. A. Brumberg**

1. E. Stiefel and G. Scheifele. Linear and Regular Celestial Mechanics. Nauka, Moscow, 1975, 304 pp. (R).
2. S. Ferraz-Mello. Dynamics of the Galilean Satellites of Jupiter. Mir, Moscow, 1983, 136 pp.(R).
3. A. J. White. The Planet Pluto. Mir, Moscow, 1983, 126 pp. (R).
4. U. N. Zakirov. Mechanics of Relativistic Space Flights. Nauka, Moscow, 1984, 152 pp. (R).
5. Relativity in Celestial Mechanics and Astrometry. Proc. of 114th Symposium of the IAU, held in Leningrad, May 28–31, 1985. Reidel, 1986, 426 pp. (in collaboration with J. Kovalevsky).
